

Fat Cat Funds Report

2016

Foreword

Chris Brycki
Founder at Stockspot

Stockspot's Fat Cat Funds Report is the largest analysis of Australian superannuation and managed funds. This is the fourth year Stockspot has run the Fat Cat Funds Report and this year we look at a record 3,800 funds to assess how they have performed after fees over the past 5 years.

The purpose of this report is to bring to light the issues of high fees, poor transparency and conflicts of interest within the wealth management industry in Australia today.

We believe Australians deserve greater visibility around where their money is invested and how it is performing. The conflicts of interest that exist due to the vertical integration of product and advice providers has led to a situation where poor performing products often slip under the radar of consumers.

We have rated funds based how they have objectively performed relative to their peers over one, three and five years. Based on this we have categorised funds into five groups, of which we believe two warrant extra attention.

Fit Cat Funds: Funds that have beaten their peer group over one, three and five years and by more than 10% over the entire period.

Fat Cat Funds: funds that performed worse than their peer group over one, three and five years and underperformed by more than 10% over the entire period.

Unfortunately for consumers, almost nothing has changed since our first report in 2013 as the big four banks and AMP continue to dominate the distribution of Fat Cat Funds.

Despite the introduction of the Future of Financial Advice (FoFA) legislation in 2013 which was aimed to help consumers, many Australians' life savings remain trapped in funds that have consistently underperformed their peers and benchmarks, largely due to their fees. A significant amount of consumer savings remains in grandfathered products with high fees rather than the low fee versions of these products that are now available. We found many examples of high-fee funds that have been closed to new investors for years but that still have over 5x the amount of customer money in them compared to their new low-fee equivalents.

The report comes as there are growing calls for a Royal Commission into banking misconduct. It is clear from our research that the scale of the conflicts of interest are so deeply embedded in Australia's financial institutions that the impact is harming people. The conflicts in financial advice caused by bank vertical integration combined with poor financial literacy has led to a situation where many Australians will not be able to afford a comfortable retirement due to the impact of fees over their lifetime.

There is a serious message at the heart of this report. Too many Australians are unaware of the devastating impact high fees have on their long term savings. Too many funds, 638 of them, have repeatedly proven their inability to deliver even index returns.

Part of this is because funds management is extremely competitive. As more fund managers have joined the industry, it has become increasingly difficult to beat the market because they are the market. Investing is a 'zero sum game' and over the long term fund managers in total can only earn the market return minus their fees. After fees are removed, about 75% of them do worse than the market index itself on any given year.

This report shows that the biggest impact to consumers comes from funds with high compounding fees. Given that superannuation is the single most important savings pot you will have in your life surely this is an issue that needs urgent attention from Government?

Stockspot has been campaigning to raise awareness of the effect of Fat Cat Funds on everyday Australians. By shining a light on the Fat Cat Funds our aim is to effect some change. Either by funds reducing their fees, by encouraging consumers to consider their options, or by Government intervening to improve fairness and transparency.

Foreword

(Continued)

We believe government should intervene to improve fairness in two ways by:

- Requiring all superannuation and managed fund products to provide their fee and performance data in a standardised format to a government fund comparison website so that consumers can easily compare their options. At the moment it's almost impossible to see how different products are really performing because the data isn't available in a standardised format.
- Implementing a public tender process for the right to manage default super funds.

Encouragingly, there is some change from consumers as people become more disenchanted with managed fund platforms. More self-directed investors and independent financial advisers access products directly via fund managers, Exchange Traded Funds (ETFs), Listed Investment Companies (LICs), automated investment services like Stockspot, or the mFund Settlement Service, often greatly reducing their upfront and ongoing costs.

A final word - it would be unfair to run the Fat Cat Report without celebrating the Fit Cat Funds. These are funds that have done consistently well for their customers by outperforming their benchmarks. They set an example of best practice that the rest of the industry should follow.

We welcome all feedback on the report and hope you find our website useful to discover and compare over 3,800 different funds - www.stockspot.com.au/fatcat

How We Identify Fat Cat Funds

Stockspot's Fat Cat ratings are based solely on statistical criteria relating to a fund's past performance. Here we explain the methodology.

Over the last couple of decades the fund management industry has become increasingly competitive. Markets trade globally around the clock, information is available within seconds and large companies in particular are analysed in detail by scores of analysts at banks, brokers and fund managers all of whom are trying to find an edge.

It is unsurprising then that fund managers need to be really good just to be average. If you are going to invest in actively managed funds, you need to be very selective in choosing those managers with the skill to deliver superior returns that justify their fees. Most fund managers do not achieve this over the long term.

The Fat Cat Funds Report is focused on identifying those funds that warrant special attention because they have consistently underperformed compared to their peers over a reasonable time period of five years.

OUR UNIVERSE AND BENCHMARKS

We have analysed Australian domiciled Superannuation Funds and Managed Investment Funds across 12 categories.

- We only consider funds that have available data on performance and fees and have existed for at least five years.
- Due to a lack of like-for-like benchmarks, geared funds have been excluded from the awards.
- Fund performance data is as at 30 June 2016.
- Funds are categorised using their underlying asset allocation, with the grouping of mixed asset funds based on how much of the fund's portfolio is invested in growth assets (shares and property)
 - Conservative: 20% or less
 - Moderate: 21% to 40%
 - Balanced: 41% to 60%
 - Growth: 61% to 80%
 - Aggressive: More than 80%

FAT CAT FUNDS

We apply two filters to identify Fat Cat Funds. First we filter those funds that have failed to outperform the average cumulative return in their category over one, three and five years. This filter is used to highlight those funds that have consistently underperformed and to strip out those that may simply have had a short-run of bad luck. For the second filter, the fund must have underperformed its category average return by 10% or more over the entire five-year period of analysis.

FLABBY CAT FUNDS

Over the past five years these funds have more often than not performed worse than the category average.

FAIR CAT FUNDS

These funds have performed around the middle of the pack over the past five years.

FINE CAT FUNDS

Over the past 5 years these funds have performed better than the category average more often than not.

FIT CAT FUNDS

We also want to acknowledge the funds which consistently perform well over long periods. To be consistent we employed the opposite filter to Fat Cat Funds to identify top performing funds. First we filter the fund universe to identify funds that outperformed the average cumulative return in their category over one, three and five years. We then apply a second filter: the fund must have outperformed its category average return by 10% or more over the entire five-year period.

Property	Australia	Industry super
	Global	Retail super

COMMENTARY

Industry Super Funds have on average charged lower fees and generated higher after-fee returns than Retail Super Funds. In all investment sectors apart from Australian Property, Retail Super Funds have had more Fat Cat Funds than Industry Super Funds. Retail Super Funds seem to do well in generating pre-fee returns, however any advantage is lost because of the high fees they charge.

What Fees Mean For A 30, 40 and 50 Year Old

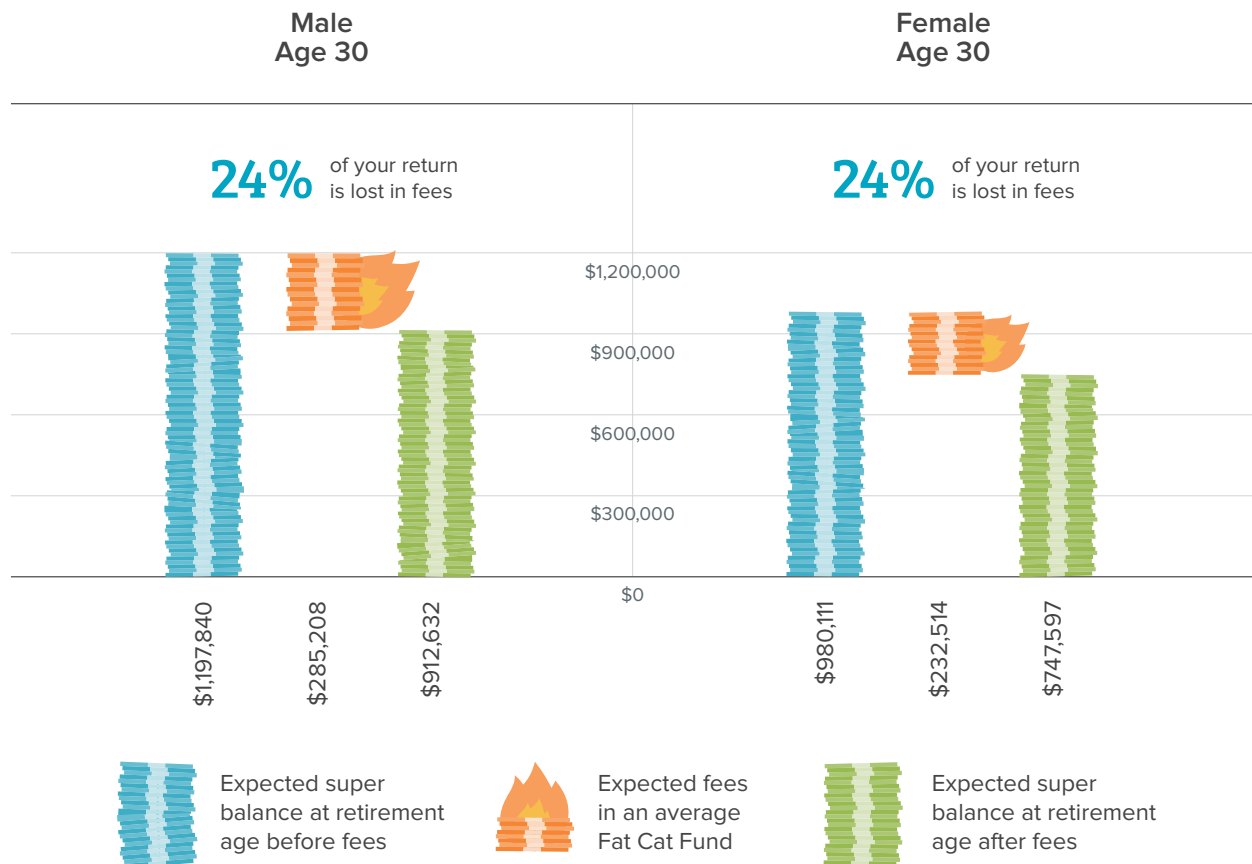

FEES MATTER.

An average Fat Cat Fund charges 2.04% per year in management fees. It may not sound like a large percentage, but over a lifetime it can add up to hundreds of thousands of dollars. The average 30 year old in a Fat Cat Fund can expect to lose nearly a quarter (24%) of their super savings in fees. Men will pay \$285,208 and women will lose \$232,514 over the lifetime of their super contributions in fees.

This is a shockingly high amount. Considering the dream of homeownership is out of reach for many people in their 30s and the rising cost of living and raising a family, this does not bode well for our ability to save for retirement.

Too many Australians are unaware of the impact that compounding high fees have on their long term savings. By switching out of a fund charging 2% per year to 0.5% per year, all other things being equal, a 30 year old could increase the super they'll have by \$328,704.

EFFECT OF FEES AT AGE 30

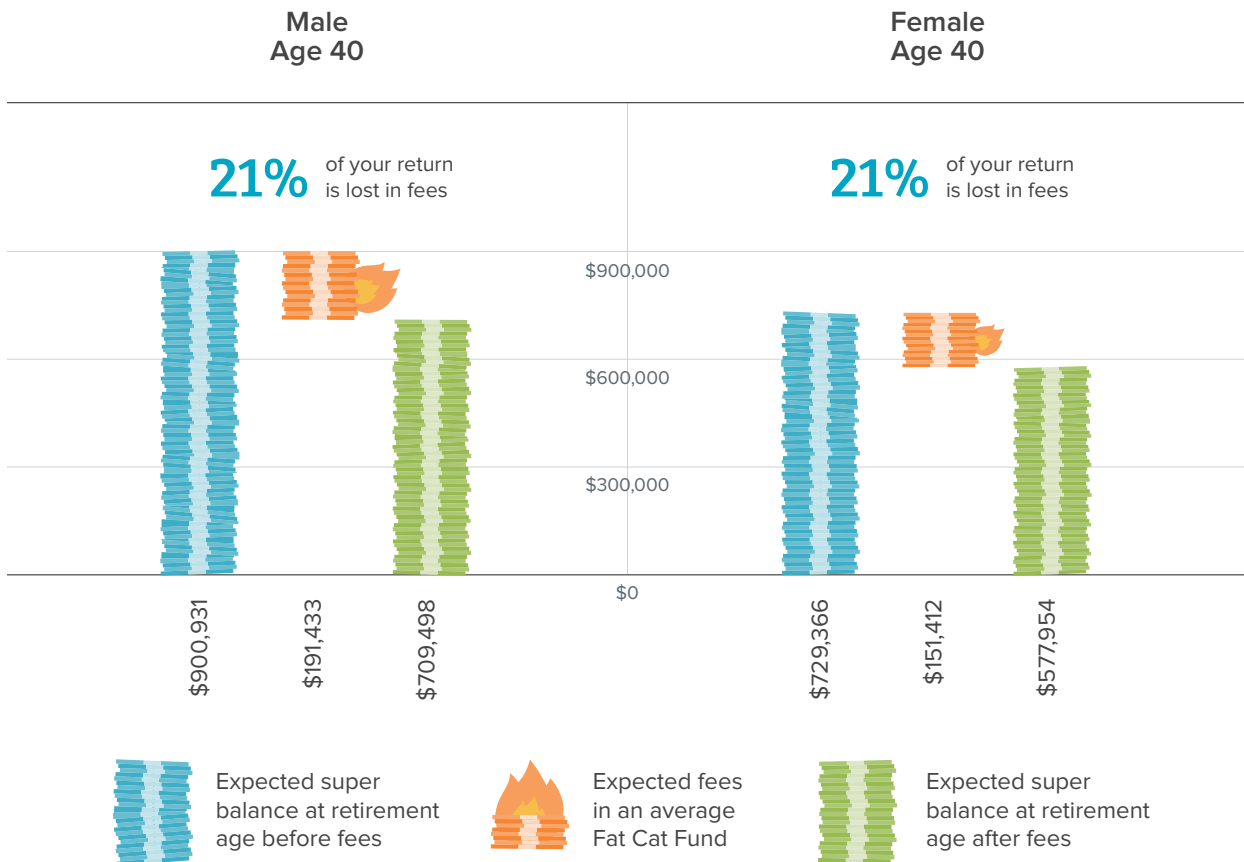

FEES HARMING WOMEN

Fat Cat Fund fees put women at an even greater disadvantage. On average women earn less than men, many take time away from the workforce for maternity leave and having children; they generally retire with a lower superannuation balance than men. So Fat Cat Fund fees eat away at women's smaller balances and put them even further behind a comfortable retirement.

FEES IMPACT ALL AGES

Even the 50 year olds of today will be affected. The average 50 year old male in a Fat Cat Fund will lose over \$100,000 in superannuation just 17 years before retirement. According to ASIC, to live comfortably in retirement as a couple you require \$58,000 per year or as a single person \$42,500 per year. Given we are all living longer the extra \$100,000 could be the difference between being self-sufficient and relying on the age pension.

EFFECT OF FEES AT AGE 40

EFFECT OF FEES AT AGE 50

We have assumed average salary figures and superannuation balances according to the Australian Bureau of Statistics in our modelling, income growth of 1.4% per year and after tax super performance of 5% per year. Different variables would lead to different results.

What Fees Mean By State

Expected super balance at retirement age before fees

Expected fees in an average Fat Cat Fund

Expected super balance at retirement age after fees

Expected retirement balances based on average incomes in each state according to ABS.

What Fees Mean By Profession

Profession	Average fees paid if stuck in a Fat Cat Fund
 Cafes and Restaurants	\$203,059
 Retail	\$207,126
 Real Estate	\$240,913
 Arts and Recreation	\$242,237
 Manufacturing	\$251,895

Should you change funds?

Funds go through periods of poor performance for many reasons. Deciding whether to stay invested or switch out of a fund is all about assessing the fund's future prospects and if you might do better in a different fund. Like any major financial decision in life you need to consider your options and what your financial goals are.

It is important to stress that the Fat Cat Funds Report is not a list of funds that should be automatically exited. The report is based purely on factual analysis of past performance which is not necessarily a guide to how it will perform in the future.

There may be good reasons to believe the funds future prospects are better. There are many different ways of investing and some funds have distinctive styles or investment approaches. Some investment approaches may go through periods of not working but could soon come back into favour. Some managers are better suited to tougher times, others to rising markets.

The fund may be taking action to improve performance. For example a new fund manager with a strong, proven track record elsewhere may be appointed. Or the fund that has historically underperformed may change its investment approach and performance could improve.

The Fat Cat Funds Report is not a 'sell' list. However the funds that appear in it do require further investigation. Unless there is good reason to believe performance will turn around based on an assessment of the funds prospects, it may make sense to look at alternative investment options.

WHERE CAN I GET MORE INFORMATION?

Learn more on how superannuation and managed funds work through the Federal Government's MoneySmart website:

About Stockspot

Stockspot is Australia's leading automated investment adviser and fund manager.

Our aim is to make professional portfolio management accessible to more Australians and help them manage their money with a transparent, low-fee online investment service.

Unlike the traditional wealth management industry Stockspot does not take commissions or kickbacks, our investment advice is unbiased and is always in the best interest of the consumer.

We're taking on the world of high fees and outdated investment products. We build and manage personalised portfolios for our clients to take the hassles out of investing.

To find out more visit:
www.stockspot.com.au

Find out why thousands of
Australians are already using
Stockspot to grow their savings.
